

# OPTIMIZE BUSINESS-CRITICAL SYSTEMS ACCESS FROM ANYWHERE

Interconnection needs seamless integration across multiple regions, technologies and providers

Together, GNX and Equinix leverage interconnection services at the digital edge, with GNX extending the Equinix ecosystem to your premises globally using over 4,000 last-mile carriers and ISPs.

Enterprises and service providers benefit from a single interconnection approach that connects all physical and virtual devices on Platform Equinix® and the world's largest digital infrastructure ecosystem. This includes connecting physical devices located within Equinix colocation and automated bare metal servers available with Equinix Metal™, with virtual devices such as routers, firewalls and SD-WAN gateways available on Equinix Network Edge.

## The major challenges you face

### Infrastructure at the edge

How can you place your network infrastructure at the digital edge to ensure optimization, especially when no telecom provider seems able to offer a complete solution?

### Multi-vendor connectivity

How can you resolve first and last mile connectivity challenges in a global, multi-site environment while eliminating the hassle of managing disparate vendors and contracts?

### Needs-driven connectivity

With so many carriers to choose from, who can you rely on for objective and independent advice focused on meeting your specific datacom connection requirements?

### Faster time-to-market

How agile and scalable are your telecom providers? Does your connectivity enable rapid expansion to remote markets, connecting you to business partners when introducing new offerings?

## The key benefits of our joint solution

### Globally distributed architecture

On Platform Equinix, you can access the industry's largest infrastructure ecosystem—with over 4,000 carriers and ISPs—through GNX, benefiting from enhanced connectivity at the digital edge.

### On-demand interconnectivity

Optimize your network based on price, quality of service and service offering; and integrate the Equinix interconnected ecosystem in your global WAN with GNX dedicated provisioning and support.

### Carrier technology agnosticism

Our bespoke offerings match your needs. Self-provisioning is available with private lines for maximum uptime and redundancy. We pick seamlessly from the Equinix edge to the destination end-point.

### Distributed infrastructure bridging

Quickly deploy and leverage interconnection services at the digital edge, globally. Our unique, single-interconnection approach connects between all your physical and virtual devices.

GNX provides bespoke, flexible first/ last mile connectivity to and from the Equinix digital edge

## Our leading capabilities that enable success

### GNX connectivity

GNX allows you to regain control of your global network infrastructure by sourcing, building and managing connectivity in a global, multi-region, multi-site, multi-vendor, multi-technology and multicloud environment. We help you connect your sites, people and devices to the entire Equinix ecosystem.

### Platform Equinix

The leading global digital enablement platform for interconnecting your business, Platform Equinix lets you reach everywhere, interconnect everyone and integrate everything. You can quickly place your solutions within the richest digital ecosystems for game-changing advantages in speed, performance and scalability.

### Equinix Fabric™ and Network Edge

Over a self-service portal or API, Equinix Fabric directly, securely and dynamically connects distributed infrastructure and digital ecosystems on Platform Equinix via global, software-defined interconnection. With Equinix Network Edge, you can configure and connect virtual network services at the edge in minutes.

### Equinix Metal

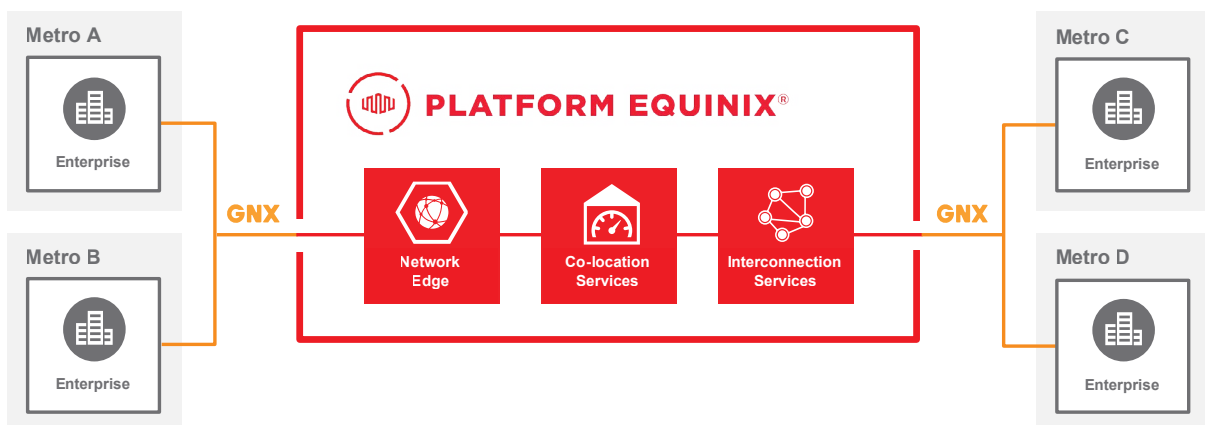

Filling the gap between colocation and cloud, Equinix Metal quickly provisions compute and networking infrastructure in markets you want to access before investing in hardware. This scalable, as-a-service offering improves performance with proximity to customers, and enables cloud-adjacent storage to move data closer to users.

## About GNX

GNX is a carrier-neutral, next-generation global connectivity service company supporting businesses that need a more agile, flexible and global approach. Our unique, technology-agnostic offering enables you to source solutions that best fit your requirements.

## About Equinix

Equinix is the world's digital infrastructure company. Digital leaders harness our trusted platform to bring together and interconnect the foundational infrastructure that powers their success. We enable our customers to access all the right places, partners and possibilities they need to accelerate advantage. With Equinix, they can scale with agility, speed the launch of digital services, deliver world-class experiences and multiply their value. world-class experiences and multiply their value.
