GLOBALGIG CONNECT – DIRECT TO ONNET SERVICES WORLD-WIDE

Single Source for Global Network Connectivity with one provider, one support team and one invoice

Global enterprises are transforming their network infrastructure to fundamentally change how they operate and deliver value to customers, employees and shareholders. Managing and establishing a global network with all the end-points can be complex and challenging. With Globalgig Connect, enterprises can leverage Globalgig's experience and engineering expertise to designed network solutions that simplify complex problems, giving our customers the flexibility and performance they are looking for.

Global Connectivity Simplified
Reducing Network Complexity with Ease

Globalgig Connect service can give businesses the benefit of quickly determining cost and connectivity, options, reducing the complexity in delivering network access to end-user locations. With Globalgig Connect, businesses can expand into markets quickly and provision services for new applications without having to manage various vendors, contracts and supplier support organizations.

Service Options

Flexibility For Global Multi-Site Businesses

Broadband & Dedicated Internet
Globalgig connects global enterprises in the way that best suits their business and budget. Our Internet services deliver the performance needed by mission-critical applications. Globalgig offers expertise in assessing user requirements and works to procure and provision the optimal service solution. Our network management and monitoring tools along with our knowledgeable network operations staff ensure your company's broadband and dedicated Internet services perform as specified. Delivering global reach and a streamlined customer experience, Globalgig can easily connect your company locations anywhere in the world.

IP Transit
Globalgig's provides fast and reliable IP transit services for metro, national and international needs. We have existing global carrier partnerships and contracts to design and build the ideal solution for our clients. From order submission through final installation, Globalgig provides personal care with our team of provisioning project managers who serve as your one-point through the entire service installation process, working with network carriers world-wide and global field technicians to ensure your' services are delivered timely and accurately. Globalgig's support infrastructure is built for the resilient, 24/7 needs of our global customers and our Network Operations Center is geo-diverse, staff ed by knowledgeable and experienced staff , providing flexible, multi-tiered customer care.

Direct to OnNet Service

Private Networking

Today's networking requirements demand high-bandwidth and high-performance to support enterprise applications like SD-WAN, data center connectivity for cloud computing and storage solutions. Globalgig's private networking services provide the end-to-end network connectivity for all traffic types. Connect locations efficiently and flexibly with bandwidth ranging from 1MB to 100GB. Our secured connectivity service delivers high-bandwidth and low latency for mission-critical applications required by enterprise customers.

Network Transformation Process

Proven Methodology for Solution Development

Globalgig Connect simplifies the complexity around designing, installing, and managing global connectivity by utilizing a proven process for gathering requirements, exploring all the best options and designing the solution that best fits each customer.
