

## It does more. It costs less. It's that simple.

The last thing your business wants to worry about is whether your infrastructure can keep pace with the need to innovate and respond to competitive pressures. Infrastructure as a Service (IaaS) is a good solution to the problem in many ways. It can reduce infrastructure costs, provide virtually limitless scalability and agility, and accelerate time to market. And it does this in a model

that virtually ensures uptime and the highest levels of security and compliance. IaaS providers generally have the upgraded, most powerful servers, storage, and networking technology to accommodate your needs. This on-demand scalability provides flexibility and greater agility in response to changing opportunities, requirements and internal or external threats.

### Alternative to on-premises IT

You no longer need a large capital investment to build it or have an expert on-site to inspect your data center because iland does all that for you with our iland Secure Cloud Infrastructure.

### Maximum convenience, flexibility and security

iland Secure Cloud is a self-service cloud infrastructure, built to meet the short and long term needs of your business.

### Why is IaaS a fit for your organization:

- Cost Savings for IT administration and staffing
- Cutting edge technology
- Scalability and elasticity
- Access to additional capabilities and functionality

### iland's Secure Cloud Infrastructure

Make iland's cloud the natural extension to your data center with:

- All-inclusive support
- Advanced security and compliance
- Straightforward, cost-effective pricing
- Global locations

### Business agility to meet all your goals

In an increasingly globalized world, centralizing data remotely and making it accessible from anywhere is an indispensable part of any business' growth strategy. At iland, we believe the cloud should be hassle-free, regardless of expertise, location or business objective.

Protect business. Power innovation.
