

SIP Trunking Virtual Voice Network

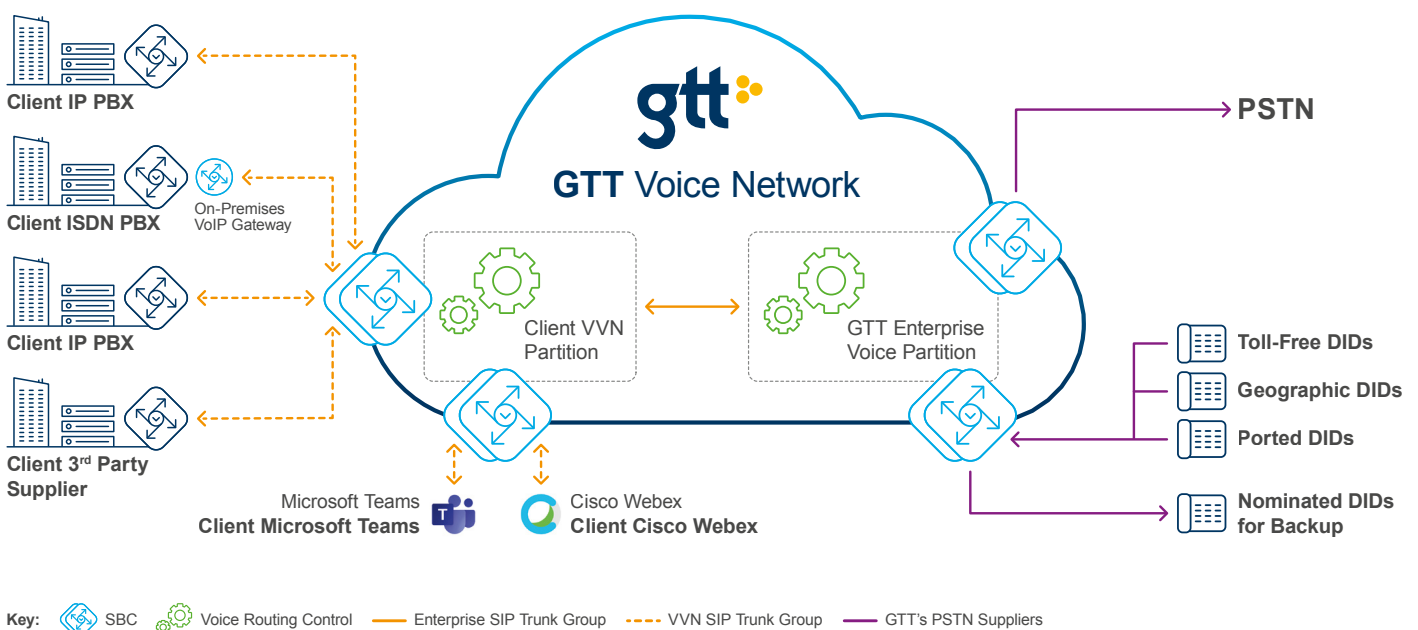

Dedicated Capacity with Client-Controlled Routing

Flexibility and Control Across a Global Voice Network

Global enterprises are increasingly looking for added routing control and flexibility to integrate their own third party voice carrier. GTT's SIP Trunking Virtual Voice Network (VVN) service provides businesses with a dedicated voice partition on our next-generation voice network. This allows enterprises to expand their global voice footprint easily without making large upfront infrastructure investments. With SIP Trunking VVN, enterprises can switch voice traffic and create interconnects with other parties, as well as connect various sites and cloud phone system providers across the GTT voice network. GTT also offers the option to connect to GTT's SIP Trunking product for voice services like DIDs and global termination capabilities.

GTT provides SIP Trunking VVN clients with the ability to control their voice routing and SIP trunk groups via the GTT client portal. Clients can instantly make real-time routing changes by uploading prepared routing configuration files.

Service Features

GTT's SIP Trunking VVN comes with various features and options that allow enterprises to be in full control of their voice solution.

Full Access to GTT SIP Trunking

For enterprises who require a full global solution, GTT provides easy access to terminate the calls you choose via the GTT SIP Trunking voice product. GTT supports routing for new and existing numbers.

Secure File Transfer

GTT provides near real-time CDRs in a flat file format. This enables users to download CDRs in a standard format from a secure File Transfer Protocol (FTPS) server, typically within two hours of call completion.

Self-Service Portal

GTT's user-friendly client portal provides businesses access to their own routing engine, allowing them to design a dedicated dial plan and change egress routing trunks as needed.

Who Is GTT?

GTT connects people across organizations, around the world and to every application in the cloud. Our clients benefit from an outstanding service experience built on our core values of simplicity, speed and agility. GTT owns and operates a global Tier 1 internet network and provides a comprehensive suite of cloud networking services. For more information on GTT (NYSE: GTT), please visit www.gtt.net.

Key Benefits

- **Global coverage**
Voice network presence across the globe, DID access in over 55 countries and national and international outbound calling worldwide.
- **Resilient architecture**
GTT's voice platform is distributed across our global network, supporting billions of voice minutes per month.
- **Easy integration**
Provides access to PSTN and complements existing voice solutions with local geographic numbers and global outbound calling.
- **Hosted switch partition**
Removes the need for a client-owned switch, decreasing capital expenditure.
